## Configuring tQuest for GP practices served by GSTT and KCH laboratories

In order to distinguish between the two catalogues, 'Super Sections' are set up in tQuest called **GSTT** and **KCH**. This will mean that each catalogue is physically separate on the ordering screen. A dummy orderable called 'Chose Lab' is set up and added to a dummy 'Super Section' Chose Lab. This allows the test requester to select which test catalogue they want.
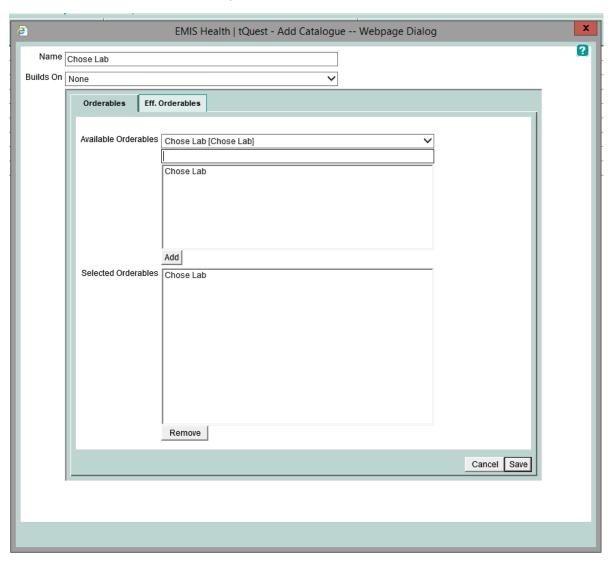

Primary Care	Pathology IMS	Ordering	Protocol	Misc	System	User Accounts	
Super Sections	Sections	Comm. Ords.	Ord. Tree View	Test Cat.	Test Groups	Statistics	
Common Orderable Super Section							Sequence
Chose Lab							1
GSTT							2
KCH							3
PRUH							4

The existing discipline 'sections' can be added to the relevant 'Super Section'

Primary Care	Pathology IMS	Ordering	Protocol	Misc	System	User Accounts	
Super Sections	Sections	Comm. Ords.	Ord. Tree View	Test Cat.	Test Groups	Statistics	
Common Orderable Section							Common Orderable Super Section
GSTT Coagulation							GSTT
GSTT Cytology							GSTT
GSTT Cytology - Non Electronic Orders							GSTT
GSTT General							GSTT
GSTT Histology - Non Electronic Orders							GSTT
GSTT Immunology							GSTT
GSTT Microbiology							GSTT
GSTT Routine Chemistry							GSTT
GSTT Routine Haematology							GSTT
GSTT Routine Virology							GSTT
GSTT Virology							GSTT
KCH Bacteriology							KCH
KCH Biochemistry							KCH
KCH Haematology							KCH
KCH Immunology							KCH
KCH Virology							KCH
PRUH Biochemistry							PRUH
PRUH Haematology							PRUH
PRUH Microbiology							PRUH

The Chose Lab orderable needs to be added to the Chose Lab Section.

Primary Care	Pathology IMS	Ordering	Protocol	Misc	System	User Accounts		
Super Sections	Sections	Comm. Ords.	Ord. Tree View	Test Cat.	Test Groups	Statistics		
Displayed Description					Description			Common Orderable Section
								Chose Lab
Chose Lab					Chose Lab			Chose Lab

A separate catalogue will need to be built to display the 'Chose Lab' items, and this is only added to those locations who can access multiple laboratories.

In order to allow the requester to select the correct test from the search, every orderable 'Requesting Description' will need to be prefixed to show which laboratory the item is set up for.
